                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Seq

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                         1067

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          300
                                                                                                                                  genes involved in psychoneuroendocrinimmune (PNI) activity. The microarray is useful in diagnosing a condition associated with PNI activity, such as CFS, type-2 diabetes, allergic condition, inflammation, cancer and infection. The present sequence represents a psychoneuroendocrinimmune gene expressed sequence tag. Note the specificatio mentions SEQ ID NO of up to 3314 but only sequences up to SEQ ID NO 1829 are provided.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          80
                      New microarray comprising probes for genes involved in psychoneuroendocrinimmune (PNI) activity, useful in diagnosing a condition associated with PNI activity, e.g., inflammatory or infectious
                                                                                                                                                                                                                                                                                                                                                                                                           20
                                                                                                                                                                                                                                                                                                                                                                                                                                     9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9

The invention relates to isolated peptide fragments of a natural corrective fragments, analogs or derivatives, wherein the peptide fragment is ranalogs or derivatives, wherein the peptide fragment is capable of binding to a membrane-associated biomolecule of a tumor cell, and the biomolecule comprises at least one sulfated polysaccharide, and the biomolecule comprises at least one sulfated polysaccharide, and membrane-associated by NK cells, with the proviso that the peptide is other than a full length NCR polypeptide or an isolated NCR extracellular domain. Also described are: (1) an antibody that recognizes an epitope on a target membrane-associated biomolecule of a tumor cell, the biomolecule of tumor cell in a subject via an NCR-dependent mechanism; and (3) a method of cell in a subject via an NCR-dependent mechanism; and (3) a method of intentifying peptides derived from NCR which are capable of binding to a membrane-associated sulfated polysaccharide of a tumor cell. The peptide of a fragment of NCR selected from NCR4, NCB10 and NCR46. It is a fragment of the D2 domain of NCR46 comprising a sequence fully defined in the specification (SEQ ID NCS: 1 and 4). Alternatively, the peptide is a fragment of NCR46 comprising a sequence fully defined in the specification (SEQ ID NOS: 1 and 4). Alternatively, the peptide is a fragment of NCR46 comprising a sequence fully defined in the specification (SEQ ID NOS: 3 and 4). Alternatively, the peptide is a fragment of NCR46 comprising a sequence fully defined in the specification (SEQ ID NOS: 1 and 2), or a fragment of the D2 domain of NCR46 comprising a sequence fully defined in the specification (SEQ ID NOS: 3 and 4). Alternatively, the peptide is a fragment of NCR46 comprising of NCR46 composition are useful for a cell via NCR4 dependent cell line a subject via an NCR46 ependent mechanism. The regeting a tumor cell in a subject via an NCR46 ependent methods of the invention are useful for targeting to the present invention are useful for the present invention is seq

The invention relates to a method of identifying a tolerance modulatory compound comprising assaying for expression or activity of at least one T regulatory (Treg) marker and at least one T effector (Teff) marker, where a change in expression or activity of the Treg marker or the Teff marker identifies the test compound as a tolerance modulatory compound. The method comprises contacting a coll with a stimulating agent and a test one Teff marker. The invention also relates to a marker and at least one Teff marker. The invention also relates to a method of identifying a tolerance promoting compound and method of identifying a tolerance modulatory compound. The method is useful for identifying a tolerance modulatory compound. The method is useful for identifying a tolerance modulatory compound. The method is useful for identifying a tolerance modulatory compound. The method is useful for compound or a tolerance modulatory compound. The methods are useful for reducing T effector cell function or for increasing T regulatory cell function or side effects of treatment with the modulator. Tolerance modulatory compounds are also useful for treating computator. Tolerance modulatory compounds are also useful for treating continument diseases, c.g. autoimmune diseases, transplant rejection or unwanted immune responses to chronically administered therapeutic proteins. Diseases include diabetes mellitus, arthritis, rheumatoid continus, sclerosis, myasthenia gravis, systemic lupus crythematosus, Hashimotos disease, dermatitis, psoriasis, ulcerative colitis, scleroderm, female genital tract inflammation, Crohns disease, sarcoidosis and pulmonary fibrosis. The compounds are further useful for enhancing immune responses, e.g. to tumors or viruses to which the body may have become tolerant. This sequence represents a human tolerance contactor.
                                                                                                                                                                                                                                                                                                                                                                                                          Identifying a tolerance modulatory compound, useful for reducing T effector (Teff) cell function or increasing T regulatory (Treg) cell function, by assaying for expression or activity of Treg marker and Teff

                  The invention relates to an isolated nucleic acid encoding a PRO polypeptide. The polypeptide, agonist or an antagonist, antibody, composition, and method are useful for diagnosing and treating an related disorder, e.g. systemic lupus erythematosus, rheumatoid arthritis. The present sequence represents a DNA encoding a PRO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This DNA sequence encodes human BMOG, a novel member of the B cell myelin oligodendrocyte glycoprotein family that is expressed by germinal centre B cells. 3 C-terminal splice variants (see AAYO6401-03) of BMOG were identified. The protein is present primarily in the spleen, in lymph nodes and in germinal centre B cells. It may have immunoregulatory functions, and soluble or chimeric fusion proteins of BMOG may be used to regulate the immune system in autoimmune or inflammatory disease. Vectors comprising BMOG, prokaryotic and eukaryotic host cells, and a method of producing BMOG using these transformed host cells are also provided. BMOG polypeptides can be used for modulating the immune system of a subject or to inhibit signal transduction in a cell expressing BMOG by contacting it with a soluble BMOG protein. The nucleic acid can be used for gene therespy. The protein can also be used to target a toxin, imaging agent or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              20

This DNA sequence encodes human BMOG, a novel member of the B cell myelin oligodendroyte glycoprotein family that is expressed by germinal centre B cells. 3 C-terminal splice variants (see AAY06401-03) of BMOG were identified. The protein is present primarily in the spleen, in lymph nodes and in germinal centre B cells. It may have immunoregulatory functions, and soluble or chimeric fusion proteins of BMOG may be used to regulate the immune system in autoimmune or inflammatory disease. Vectors comprising BMOG, prokaryotic and eukaryotic host cells, and a method of producing BMOG using these transformed host cells are also provided. BMOG polypeptides can be used for modulating the immune system of a subject or to inhibit signal transduction in a cell expressing BMOG by contacting it with a soluble BMOG protein. The nucleic acid can be used for gene tradionuclide to a cell expressing BMOG. (All claimed)

           The invention relates to an isolated nucleic acid encoding a PRO polypeptide. The polypeptide, agonist or an antagonist, antibody, composition, and method are useful for diagnosing and treating an related disorder, e.g. systemic lupus erythematosus, rheumatoid arthritis. The present sequence represents a DNA encoding a PRO

Novel PRO polypeptide e.g., PRO69614, PRO71106, or PRO86388 useful for treating an immune related disorder such as systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis or
                                                                                                                                                               The invention relates to human PRO polypeptides and the polynucleotides encoding them. The polypeptides and polynucleotides are useful for treating and diagnosing immune related disorders in mammals. The immune related disorders include systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, systemic sclerosis, Sjogren's syndrome, vasculitis, sarcoidosis, autoimmune haemolytic ansemia, autoimmune thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating diseases of the central or peripheral nervous system, demyelinating polyneuropathy, polyneuropathy, This sequence represents a human PRO polynucleotide of the invention.
                                                                                                                       Claim 1; SEQ ID NO 758; 1731pp; English.
                                                                          spondyloarthropathy.

                                                                                                                                                                                                                                                                                                   8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to human NKp30 receptor and its corresponding CDNA molecule which is involved in natural cytotoxicity mediated by natural killer (NK) cells and antibodies that identify the same. NKp30 receptor is a member of immunoglobulin super family (Iq-SF). NKp30 is selectively expressed on the surface of human mature NK cells. NKp30 and its CDNA are cosful for detecting and/or quantifying the presence of NK cells in a biological sample. The invention also provide kits for detecting and/or quantifying the presence of NK cells, for the selective removal of NK cells from a biological sample, for the positive and selective custing and/or purification of NK cells from a biological sample, for the positive and selective centancement, are composition which is used as a drug for grafting confidencement, graft versus himbition, stimulation of graft corresponding and lung adenocarcinoma, and/or the prevention, palliation and/or therapy of solid or liquid tumours, conformation independent and Numbition and lung adenocarcinoma, and/or microorganism, notably viral infection. Nkp30 antibodies are useful for identifying Nkp30 natural ligands and allow assessment of the level of antibodies are useful in the diagnosis of tumours or of infection. The present sequence is human Nkp30 receptor CDNA ampliced product which is present sequence is human Nkp30 receptor CDNA and the contact of the sequence is human Nkp30 receptor CDNA and independent and Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman Ncman N

The invention relates to human NKp30 receptor and its corresponding cDNA molecule which is involved in natural cytotoxicity mediated by natural circle (NK) Cells and antibodies that identify the same. NKp30 receptor is a member of immunoglobulin super family (Ig-SF). NKp30 is selectively expressed on the surface of human mature NK cells. NKp30 and its cDNA are useful for detecting and/or quantifying the presence of NK cells in a biological sample. The invention also provide kits for detecting and/or cells from a biological sample, for the selective removal of NK cells from a biological sample, for the selective removal of NK cells from a biological sample, for the selective removal of NK cells from a biological sample and for the in vitro purification of NK cells from a biological sample and for the in vitro stimulation of NK cells from a biological sample and for the in vitro stimulation of NK cells from a biological sample and for the in vitro corpuration of NK cells from a biological sample and for the in vitro stimulation of NK cells from a biological sample and for individuation of graft versus tumour (GVT) and especially graft versus leukaemia (GVL), and for the prevention, palliation and/or therapy of solid or liquid tumours, cuch as melanoma, hepatocarcinoma and lung adenocarcinoma, and/or microorganism, notably viral infection. NKp30 antibodies are useful for dentifying NKp30 ligand expressed on an NK-susceptible target cell and the comparison of this level to the standard physiological one. Hence NKp30 controction when a necessament of the level of the recover of infection. The
                                                                                                                                                                                                                                                                                                                                              rel compound, useful for detection and/or quantifying the presence of cells, comprises the amino acid sequences of the NKp30 molecule.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  present cDNA sequence encodes human NKp30 receptor

The present invention describes human cancer-associated (CA) nucleotide sequences (1). Also described: (1) an expression vector comprising (1); (2) a host cell comprising (1) or the expression vector; (3) a microarray for detecting a CA nucleic acid; (4) an isolated polypeptide encoded within an open reading fragment, that binds to the above polypeptide; (6) a hybridoma that produces the monoclonal antibody and a pharmaceutical composition comprising the antibody and a pharmaceutical composition comprising the antibody and a pharmaceutical composition comprising the antibody and a pharmaceutical composition comprising the antibody and a pharmaceutical composition comprising the antibody and a pharmaceutical composition comprising the antibody and a pharmaceutical composition comprising the antibody and a pharmaceutical composition comprising the antibody and a pharmaceutical composition of the polymucleotide that selectively chypridises to any of the polymucleotide sequences mentioned above; (9) methods for diagnosing cancer or for detecting the presence or absence of cancer cells in an individual; (10) a method for delivering a therapeutic agent to cancer cells in an individual; (12) an electronic library

                                                                                                                                                                                                                                                                                                                ò
                                                                         g
                                                                                             ò
                          원
                                                   8
comprising the polynucleotide or polypeptide, or their fragments,
mentioned above; (13) a method of screening for anticancer activity; (14)
methods for detecting cancer associated with expression of a polypeptide
correct the presence of the antibody in a test cell or serum sample; (15) a
method for screening for a bioactive agent capable of modulating the
activity of a CA protein encoded by the above nucleic acid molecule; and
(16) a method for treating cancers. (1) has cytostatic acid molecule; and
be used in gene therapy, in vaccines, as a tyrosine kinase antagonist,
and as a G-protein coupled receptor antagonist. The compositions and
methods of the present invention can be used for diagnosing, preventing
cancer, especially lymphomas. They may also be used in
screening for agents that may be used for treating or preventing cancer.
The present sequence represents a human CA gene sequence, which is given
the exemplification of the present invention. Note: The sequence data
for this patent did not form part of the printed specification, but was
cobtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      2921

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a nucleic acid array for detecting a cancer associated (CA) nucleic acid, comprising two or more nucleic acid probes. The invention also relates to a peptide array comprising two or more isolated polypeptides encoded by a CA nucleic acid sequence, a compound that binds to a polypeptide, an isolated antibody or its fragment which binds to a polypeptide, which is prepared by immunizing a host animal

tragment and collecting cells from the host expressing antibodies against the antigen or its antigen binding fragment, a composition comprising the antibody and a carrier, a method of screening for anticancer activity, a method of detecting a CA nucleic acid, a method of diagnosing cancer and a method of inhibiting expression of a CA nucleic acid in a cell. The CA nucleic acids are useful for detecting CA nucleic acid in a notation of inhibiting expression of a CA nucleic acid in a cell. The CA nucleic acids are useful for detecting CA nucleic acids. The antibody is useful for detecting the presence or absence of cancer cells in an individual which involves contacting cells from the individual with the antibody, where the detection of the complex correlates with the presence of cancer cells in the composition is useful for inhibiting growth of cancer cells in an individual or for delivering a therapeutic agent to cancer cells in an individual. The composition is useful for inhibiting expression of a CA gene in a cell: This sequence represents human cancer-associated genomic DNA of the invariants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      the invention.

                       The invention relates to detecting (MI) granulocyte (GC) activation of Grane (B) (GR) identified by DNA chips analysis as given in the specification, and comparing the expression level in an unactivated GC, where captured an expression level in an unactivated GC, where captured an expression of GR is indicative of GCA. Also included are modulating (M2) GA by contacting GC with an agent that alters the modulating (M2) GA by contacting GC with an agent that alters the expression of at least one gene in GR; (2) screening (M3) for an agent capable of modulating GA or an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease using the gene expression or sterile inflammatory disease, by detecting the level of expression or sterile inflammatory disease, by detecting the level of expression or the gene is indicative of inflammation; (4) treating of expression in a sample of the tissue of gene(8) from GB, where the level of expression or the gene is indicative of inflammation; (4) treating of expression in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by contacting a tissue having inflammation with an expression in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by contacting a tissue having inflammation with an exposure of a subject to a pathogen or sterile inflammatory disease (e.g. for screening an agent capable of modulating GA preferably in an inflammatory disease (e.g. for screening an agent capable of modulating GA preferably in an inflammatory disease, an inflammatory disease (e.g. for screening an agent capable of modulating GA preferably in a clasue, an allergic response in a subject to a pathogen or sterile inflammatory disease, undertained injury, renal reperfusion injury, ARDS, adult correction and MS is useful for detecting an infection, parasitic infection, parasitic infection, parasitic infection, parasitic infection, parasitic infection or the p

```
This DNA sequence encodes human BMOG, a novel member of the B cell myelin oligodendrocyte glycoprotein family that is expressed by germinal centre B cells. 3 C-terminal splice variants (see AAY06401-03) of BMOG were identified. The protein is present primarily in the spleen, in lymph nodes and in germinal centre B cells. It may have immunorequiatory functions, and soluble or chimeric fusion proteins of BMOG may be used to regulate the immune system in autoimmune or inflammatory disease. Vectors comprising BMOG, prokaryotic and eukaryotic host cells, and a method of producing BMOG protein and eukaryotic host cells, and a method of propeptides can be used for modulating the immune system of a subject or to inhibit signal transduction in a cell expressing BMOG by contacting it with a soluble BMOG protein. The nucleic acid can be used for gene therapy. The protein can also be used to target a toxin, imaging agent or radionuclide to a cell expressing BMOG. (All claimed.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      125
